***PRESS RELEASE***  
*For Immediate Release*

**An Investment in Waste Fill Facilities at Leading Market Rates**

Lantrak is pleased to announce a significant investment in the circular economy with the establishment of 3 key sites in Victoria that will accept waste fill containing brick, concrete and rubble.

Sites located in Lysterfield, Clayton and Ravenhall are now open for business and are accepting Waste Fill at market leading rates. A fourth site will be opening soon.

The managing director of Lantrak Gary Liemant said “*Lantrak has had a long history of managing the nation’s materials covering some of the biggest and most significant projects in the country. The opening of these Waste Fill centres is a further step in our goal of maximising the value of materials by recovering them and re-using them as a key resource*”

Lantrak was established in 1959 as a transport cooperative and has grown into the largest materials management business in Australia. With strategic company owned sites, Lantrak specialises in Land Remediation, Environmental Services, Material Re-Use and Plant Hire to support the delivery of projects at all levels

Mr Liemant went on to say “*We have deliberately established these Waste Fill sites with a broad geographic spread to ensure all of our clients can efficiently and economically take advantage of our services rather than simply divert to landfill*”

The Lantrak Waste Fill sites are open for business, and details of a fourth location to be provided to the market shortly.
